Comments: ---Some herbicide labels list restrictions based on soil pH in water. Use the estimated pH in water of 7.3 as a guide to the label. If you wish to have soil pH in water analyzed, contact your dealer or local Extension specialist listed below.

---The soil should be tested every 2 to 3 years to determine the effects of your fertilization practices and to develop a new set of fertilizer and limestone guidelines.

***The soil has adequate calcium and an adequate pH for vegetables. Application of lime, wood ashes, or calcium rich fertilizer is not recommended.

***The soil needs additional organic matter for gardens and crops other than lawns. See MU Publication G6950, "Steps in Fertilizing Garden Soil" and G6956, "Making and Using Compost".

---Particle Size Analysis: Texture: silt loam ; % Sand: 27.5, % Silt: 55.0 and % Clay: 17.5.
